

# Innovative Real Time Forklift Fleet Management System

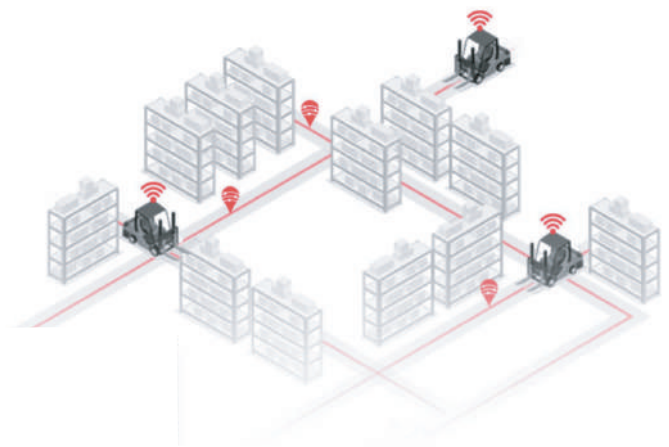

## Fleet Alert<sup>®</sup>

SMART CONTROL. EFFECTIVE DECISIONS.

Fleet Alert<sup>®</sup> is an innovative forklift fleet management system intended to optimize logistic operations in warehouses increasing productivity, improving safety and reducing costs.

- **Improve industrial safety** by reducing accidents and damage to assets.
- Real-Time total **visibility** of forklift fleet utilization and driving habits of the operators.
- **Enhance productivity** through Data Analytics and Business Intelligence tools.
- Significant **reduction in fleet operating costs** and optimization of resources.

# Smart control. Effective decisions

Fleet Alert® makes your warehouse logistics operation more efficient. A powerful fleet management telematics platform, based in sensor technology, communication network, real-time safety alerts, geolocation and data analytics tools intended to optimize the operations of forklift fleets, improving productivity, reducing costs and generating safer working environments

Fleet Alert® is a modular and scalable solution that can be implemented in all your fleet vehicles, (any make and model) , allowing data driven companies to have a real-time view of all relevant information on vehicles and operators, which facilitates decision-making to **improve safety, reduce costs and increase productivity.**

**Operator access control and Pre Operational Checklist**

**Real-time fleet usage monitoring**

**Utilization analytics**

**Safety alerts**

**Location**

**Load sensing system**

**Impact detection and Proximity sensors**

**Battery optimization**

**Fleet Alert®**  
SMART CONTROL. EFFECTIVE DECISIONS.
